

Javascript - Introduction

- Aditya Kumar
Chief Technology Officer, edwisor.com

We will start with the following concepts

- 1) What is javascript ?
- 2) Moving Server side
- 3) Era of frameworks
- 4) Rise of Javascript to power

Javascript is a language and a trend!

IT'S NOT JAVA!!!

JAVASCRIPT AND
JAVA ARE 2
DIFFERENT
LANGUAGES

**Started as
Language of cool
webpages with
dynamism?**

but evolved into a
powerful tool for
coding in many
server side
frameworks like
Node.JS etc

**Now there are big
frameworks based
on javascript which
cover almost all
aspects of
development. In
other words, you
can create anything
with it.**

Moving Javascript to server side was a big step

- Today, JS is known as the language of web because you can program applications of both frontend and backend using JS.
- Although the initial implementations of javascript were written in netscape era only, but it gained its real popularity because of Node.JS
- You can read more about [JS history](#) on wikipedia

Era of JS frameworks

DAYS

**SINCE LAST NEW
JAVASCRIPT FRAMEWORK**

Era of JS frameworks

- There are countless javascript frameworks out there and everybody is confused which one to learn
- Let me tell you my little secret - focus on basics, start from scratch and then move your way up.
- That's what we are going to follow to be a good javascript programmer and developer.

Rise of JS to power

- According to Stack Overflow Developer Survey 2017, Js is the most popular programming language in world
- Nodejs and Angular which is a javascript framework has most popular and commonly used framework
- Javascript is the most popular language by occupation
- You can find the [full survey here](#)

The next steps are ...

- Choosing the development environment
- Your hello world program
