We will start with the following concepts

- 1) Concept of Default parameters in ES6

Let's look at a few simple functions and their behaviour with wrong input

- 1) Function to multiply two numbers
- 2) Function to Generate email

Deciding whether to use default parameters or not is easy

- 1) If you want to ensure data consistency, you must definitely use them
- 2) My recommendation is to go with them specially if data type other than string is involved in parameters.

The next steps are ...

- REST parameters
